FOR IMMEDIATE RELEASE
February 5th 2015

**HYDRASPORTS CUSTOM 53
SUEÑOS THE WORLD'S
LARGEST, OUTBOARD
POWERED, CENTER CONSOLE
FISHING BOAT DEPOLYS NAVY
SBIR COMBATANT CRAFT
TECHNOLOGY, RECEIVES MIL-
TOUGH RATING**

MELBOURNE, FLORIDA: Structural Composites is pleased to announce that the new 53 Sueños outboard powered center console fishing boat is the first boat to receive its MIL-TOUGH Rating. Hydrasports Custom 53 Sueños, the World's Largest, Outboard Powered, Center Console Outboard Fishing Boat, is one of the first commercial deployments of Structural Composites' NAVY SBIR Advanced Combatant Craft Technology. The advanced single skin transom and single skin hull provide the durability, ruggedness and ease of maintenance of solid laminate construction but at a weight equal to or less than sandwich construction.

The 53 Sueños is designed and built using tough high performance Co-Rez vinyl ester resin, advanced Prisma single skin hull and single skin transom construction, high strength orthotropic reinforcements and the newly developed MEGAFORM preform stringer system. The use of these premium materials and the incorporation of Navy SBIR technology have earned the Hydrasports Custom 53 Sueños the MIL-TOUGH rating.

Scott Lewit, company president, says, "It is really wonderful to see the advances we are achieving for the Navy benefit the recreational boating industry. The first Hydrasports Custom 53, Sueños, is being unveiled at the 2015 Miami Boat Show and features four 557 HP Seven Marine Outboards. The weight and thrust from these powerhouses is transferred into the hull structure using our Navy SBIR-derived single skin transom. Loads from the transom are distributed into the advanced single skin hull using Prisma MEGAFORM preforms. The MIL-TOUGH Rating lets boat buyers know that the advanced technology developed for the US Navy's Combatant Craft has been engineered into their boat."
